

IMPLANT TRAINING COURSES

Hands-on Clinical Implantology Program

Advance your clinical skills in implant dentistry with our **structured, hands-on implant training courses** designed for dentists who want real clinical exposure, confidence and competence. These programs focus on **implant placement under expert guidance, combining theory with extensive practical experience.**

Whether you are a beginner starting implant practice or a clinician looking to enhance speed and confidence, our tiered courses allow you to choose the level that fits your goals.

COURSE HIGHLIGHTS

- Step-by-step guidance by experienced implantologists
- Limited participants per batch for personalized mentoring
- Evidence-based protocols and simplified workflows
- Emphasis on clinical decision-making and complication management
- Certificate of completion provided

COURSE OPTIONS

1. Basic Implant Placement Course

Duration: 3 Days

Implant Placement: 2 Implant placement

Course Fee: ₹15,000/-

Participants: 4 or less

Course Overview

This course is **ideal for: dentists who are new to implant dentistry** and want to gain initial basic exposure to implant placement in a controlled and guided environment. **Who should go for this?**

- Fresh graduates
- Dentists planning to start implant practice
- Clinicians seeking confidence in basic implant surgery

Learning Objectives

- Introduction to implant systems and armamentarium
- Case selection and treatment planning
- Basic surgical protocol for implant placement
- Sterilization, flap design and suturing techniques
- Hands-on placement of **one implant** on patient under supervision of an expert and **one implant in dummy jaw**

2. Intermediate Implant Placement Course

Ideal for Dentists with basic implant knowledge or prior exposure

Duration: 7-10 days

Implant Placement: 6 Implants

Course Fee: ₹60,000/-

Participants: 4 or lesser

Course Overview

This program is designed for dentists who are looking for **repeated, structured hands-on experience** and a deeper clinical understanding of implant surgery. The course bridges the gap between basic knowledge and independent practice by allowing participants to place multiple implants on patients under close expert supervision.

Through continuous guidance and real-time feedback, participants develop better clinical judgment, improved hands-on skills and greater confidence in managing routine implant cases. Emphasis is placed on understanding each step of the surgical workflow, from diagnosis to post-operative care, ensuring predictable and reproducible outcomes.

Learning Objectives

- Advanced case selection and diagnostic planning
- Radiographic interpretation and accurate implant positioning
- Understanding implant angulation, depth, and spacing
- Flap and flapless surgical techniques
- Soft tissue handling and management during implant placement
- Selection of implant and placement of three types of implants 1. Conventional hexagonal 2. Conical 3. Morse taper design.
- **One implant in dummy jaw** with flap raising and suturing exercise and placement of **five implants on patients** under supervision of an expert.
- Post-operative care, follow-up protocols and complication prevention

Ideal For

- **Dentists with basic implant knowledge or prior exposure**
- Clinicians aiming to place implants independently with confidence
- Practitioners looking to improve surgical efficiency and consistency

3. Advanced Comprehensive Implant Training Program

Duration: 1 Month

Implant Placement: 20 Live Implants

Course Fee: ₹1, 20,000/-

Participants: 2

Course Overview

This is a **comprehensive, clinically intensive implantology program** designed to transform participants into confident implant practitioners. With extensive hands-on exposure, participants gain real-world experience managing a **wide variety of cases**.

Learning Objectives

- Comprehensive treatment planning and case sequencing
- Surgical protocols for **multiple clinical scenarios**
- Soft tissue management and suturing mastery; one implant in dummy jaw with flap raising and suturing exercise.
- Selection of implant and placement of three types of implants 1. Conventional hexagonal; 2. Conical; 3. Morse taper design
- Placement of **20 implants on patients** under expert supervision
- Managing complications and troubleshooting
- Implant placement in **varying bone conditions**

Ideal For

- Dentists serious about implantology as a **core practice**
- Clinicians seeking mastery through repetition of cases
- Those planning to build a **strong implant-based practice**

CERTIFICATION

All participants will receive a **Certificate of Completion** at the end of their respective courses.

ENROLLMENT DETAILS

- Limited seats per batch (as mentioned above in each course)
- Course dates: as per schedule made by the organizer
- Early registration recommended
